

ABSTRACT OF THE DISCLOSURE

A lens module includes a non-cylinder lens and a clamping apparatus.

The clamping apparatus includes a base, two side parts, and a top part.

Two side parts are disposed on two ends of the base to form a containing

5 trough for holding the lens. One end of the top part is connected to one side

part and the other end is fixed on the other side part. Two screw holes on

the top part allow two adjusting screws to be screwed into for pressing the

lens. Two elastic devices provide the elasticity between the lens and the

base and the relative height of two sides of the lens is adjusted by turning the

10 two adjusting screws.
